

Introduction

Hu-Tech has been offering expert ergonomics training for over 17 years. During this time we have developed our training courses in line with changes in technology, legislation and customer requirements. Many organisations are under increasing pressure, finding it difficult to free-up key staff for classroom training. We have risen to this challenge by developing bespoke internet and

intranet training packages, including on-line competency testing. Working with technical partners, in-house training and IT departments we have successfully delivered training packages for global corporations which enable basic and detailed training to be delivered in-house, at employees desks whenever they have time and opportunity to learn.

Strategic Advice

- Advice on the style, content and ergonomics (HCI) of the learning site to suit your organisation
- What works in an e-learning environment, and what doesn't work
- Structuring the course for the learning environment

Our e-learning training services include

- Writing and customising the training to suit your people and your culture
- Designing and structuring the training site
- Preparing and delivering the content
- Assisting your organisation with implementation, if required

Case studies

Hu-Tech has produced a number of training packages for global organisations. These have included:

- Basic ergonomics courses available to all employees
- Task based ergonomics focusing on optimising tasks within the organisation
- Detailed ergonomics training looking at posture, physiology, workplace, work organisation, musculoskeletal disorders, human error, anatomy and anthropometry
- Module based testing to enable progression onto the next part of the training course
- Knowledge checks throughout each course module
- A final test marked externally by an ergonomist to enable competency based assessment of individuals required to use ergonomics for their work

An example of our e-learning course is available to be demonstrated. Please contact us for more information.
